CW-6100AT laser water chiller is produced by Guangzhou Teyu Electromechanical Co., Ltd. It can be applied to cool IPG fiber laser

CW-6100AT is dual temperature and dual pump chiller of 4200W cooling capacity. It is able to cool the fiber laser and optic lense at the same time, multiple use for saving cost, space and manual move, quite convenient for the user

IPG fiber laser water chiller features

1. 4200W cooling capacity; optional environmental refrigerant;
2. $\pm 0.5^{\circ}\text{C}$ precisely temperature control;
3. The intelligent temperature controller has 2 control modes, applicable to different applied occasions; with various setting and display functions;
4. Dual temperature and dual pump to satisfy different needs of fiber laser device and the lens;
5. With Ion adsorption filtrating and test functions conform to fiber laser device operating requirements;
6. Multiple alarm functions: compressor time-delay protection, compressor overcurrent protection, water flow alarm and over high / low temperature alarm;
7. Multiple power specifications; CE approval; RoHS approval;
8. Long working life and easy operation;

Fiber laser water chiller specification

One-stop automatic intelligent temperature control: in different environment, user does not need to change setting due to it will automatically switch to appropriate operating temperature.

CW-6100AT: applied to cool a single 300W-1000W fiber laser;

Equipped with heat booster and water filter.

About S&A Brand

TEYU produces more than 60000 units of industrial chillers by year, we always insist on "Quality First" in design and production.

"S&A" and "TEYU" have been enjoying high reputation among hundreds of manufacturers which are from both at home and abroad, and export rate reaches above 60%
